

# Basic Programming assignment 17

1. Create a function that takes three arguments a, b, c and returns the sum of the numbers that are evenly divided by c from the range a, b inclusive ?

Examples:

evenly\_divisible(1, 10, 20) → 0 # No number between 1 and 10 can be evenly divided by 20. evenly\_divisible(1, 10, 2) → 30 # 2 + 4 + 6 + 8 + 10 = 30 evenly\_divisible(1, 10, 3) → 18 # 3 + 6 + 9 = 18

```
In [2]: def evenDivisible(a,b,c):  
        divList = []  
        for num in range(a,b+1):  
            if num%c == 0:  
                divList.append(num)  
        print(f'{a,b,c} → {sum(divList)}')
```

```
evenDivisible(1,10,20)  
evenDivisible(1,10,2)  
evenDivisible(1,10,3)
```

```
(1, 10, 20) → 0  
(1, 10, 2) → 30  
(1, 10, 3) → 18
```

2. Create a function that returns True if a given inequality expression is correct and False otherwise ?

Examples: correct\_signs("3 < 7 < 11") → True

correct\_signs("13 > 44 > 33 > 1") → False

correct\_signs("1 < 2 < 6 < 9 > 3") → True

```
In [4]: def checkEquality():  
        in_string = input('Enter the inequality: ')  
        out_bool = eval(in_string)  
        print(f'{in_string} → {out_bool}')
```

```
for x in range(3):  
    checkEquality()
```

```
Enter the inequality: 3 < 7 < 11  
3 < 7 < 11 → True  
Enter the inequality: 13 > 44 > 33 > 1  
13 > 44 > 33 > 1 → False  
Enter the inequality: 1 < 2 < 6 < 9 > 3  
1 < 2 < 6 < 9 > 3 → True
```

3. Create a function that replaces all the vowels in a string with a specified character ?

Examples:

replace\_vowels("the aardvark", "#") → "th# ##rdv#rk"

replace\_vowels("minnie mouse", "?") → "m?nn?? m??s?"

replace\_vowels("shakespeare", "\*\*") → "shksp\*\*r"

```
In [5]: def replaceVowels():  
        vowels = ['a','e','i','o','u','A','E','I','O','U']  
        in_string = input("String: ")  
        in_string_copy = in_string  
        in_char = input('Replacement character: ')  
        for ele in in_string:  
            if ele in vowels:  
                in_string = in_string.replace(ele,in_char)  
        print(f'{in_string_copy} {in_char} → {in_string}')
```

```
for x in range(3):  
    replaceVowels()
```

```
String: the aardvark
Replacement character: #
the aardvark # → th# ##rdv#rk
String: minnie mouse
Replacement character: ?
minnie mouse ? → m?nn?? m??s?
String: shakespear
Replacement character: *
shakespear * → sh*k*sp**r*
```

#### 4. Write a function that calculates the factorial of a number recursively ?

Examples:

factorial(5) → 120

factorial(3) → 6

factorial(1) → 1

factorial(0) → 1

```
In [6]: def factorial(n):
        if n==0:
            return 1
        return n * factorial(n-1)

print(f'factorial(5) → {factorial(5)}')
print(f'factorial(3) → {factorial(3)}')
print(f'factorial(1) → {factorial(1)}')
print(f'factorial(0) → {factorial(0)}')
```

factorial(5) → 120

factorial(3) → 6

factorial(1) → 1

factorial(0) → 1

#### 5. Hamming distance is the number of characters that differ between two strings ?

To illustrate:

String1: "abcbba"

String2: "abcbda"

Hamming Distance: 1 - "b" vs. "d" is the only difference.

Create a function that computes the hamming distance between two strings.

Examples:

hamming\_distance("abcde", "bcdef") → 5

hamming\_distance("abcde", "abcde") → 0

hamming\_distance("strong", "strung") → 1

```
In [7]: def genHamDistance():
        in_string_1 = input('Enter the String_1: ')
        in_string_2 = input('Enter the String_2: ')
        if len(in_string_1) == len(in_string_2):
            count = 0
            for i in range(len(in_string_1)):
                if in_string_1[i] != in_string_2[i]:
                    count = count+1
            print(f'Hamming Distance b/w {in_string_1} and {in_string_2} → {count}')
        else:
            print('Both Strings Must be of Same Length')

        for x in range(3):
            genHamDistance()
```

Enter the String\_1: abcde

Enter the String\_2: bcdef

Hamming Distance b/w abcde and bcdef → 5

Enter the String\_1: abcde

Enter the String\_2: abcde

Hamming Distance b/w abcde and abcde → 0

Enter the String\_1: strong

Enter the String\_2: strung

Hamming Distance b/w strong and strung → 1
