

Basic Programming assignment 11

1. Write a Python program to find words which are greater than given length k ?

```
In [1]: def checkLengthOfString():
    in_string = input("Enter the string: ")
    in_length = int(input('Enter the length of the string: '))
    out_string = []
    for string in in_string.split(" "):
        if len(string) > in_length:
            out_string.append(string)
    print(','.join(out_string))

checkLengthOfString()
```

```
Enter the string: Ineuron full stack data science
Enter the length of the string: 3
Ineuron,full,stack,data,science
```

2. Write a Python program for removing i-th character from a string ?

```
In [2]: def removeCharacter():
    in_string = input("Enter the String: ")
    in_char_num = int(input("Enter the ith Character: "))
    out_string = ''
    for ele in range(len(in_string)):
        if ele != in_char_num:
            out_string = out_string + in_string[ele]
    print(out_string)

removeCharacter()
```

```
Enter the String: Ineuron
Enter the ith Character: 3
Ineron
```

3. Write a Python program to split and join a string ?

```
In [3]: def splitJoinString():
    in_string = input('Enter the string: ')
    print(f"Split String: {in_string.split(' ')}")
    print(f"Join String: {' '.join(in_string.split(' '))}")

splitJoinString()
```

```
Enter the string: Ineuron full stack data science course
Split String: ['Ineuron', 'full', 'stack', 'data', 'science', 'course']
Join String: Ineuron full stack data science course
```

4. Write a Python to check if a given string is binary string or not ?

```
In [4]: def checkBinary():
    in_string = input('Enter the string: ')
    stun = 0
    for ele in in_string:
        if ele in ['0','1']:
            stun = 1
            continue
        else:
            stun = 0
            break
    statement = 'is a binary string' if stun == 1 else 'is not a binart string'
    print(f'{in_string} {statement}')

checkBinary()
checkBinary()
```

```
Enter the string: Ineuron
Ineuron is not a binart string
Enter the string: 1010101
1010101 is a binary string
```

5. Write a Python program to find uncommon words from two Strings ?

```
In [6]: def unCommonWords():
    in_string_1 = set(input("Enter the String 1: ").split(' '))
    in_string_2 = set(input("Enter the String 2: ").split(' '))
    out_string = (in_string_1.union(in_string_2)).difference(in_string_1.intersection(in_string_2))
```

```
print(out_string)
```

```
unCommonWords()
```

```
Enter the String 1: Ineuron recorded session
Enter the String 2: Ineuron live zoom session
{'live', 'zoom', 'recorded'}
```

6. Write a Python to find all duplicate characters in string ?

```
In [8]: def duplicateChars():
        in_string = input('Enter the string: ')
        non_duplicate_list = []
        duplicate_list = []
        for ele in in_string:
            if ele not in non_duplicate_list:
                non_duplicate_list.append(ele)
            else:
                duplicate_list.append(ele)
        print(f'Duplicate characters are: {list(set(duplicate_list))}')

duplicateChars()
```

```
Enter the string: Full stack data science program
Duplicate characters are: ['e', 'r', 's', ' ', 'l', 'c', 'a', 't']
```

7. Write a Python Program to check if a string contains any special character?

```
In [9]: def checkSpecialChar():
        spl_chars = '[@_!#$%^&*()<>?/\|}{~:]'
        in_num = input('Enter the string: ')
        count = 0
        char_list = []
        for ele in in_num:
            if ele in spl_chars:
                char_list.append(ele)
                count = count+1
        print(f'There are {count} Speical Characters in {in_num} which are {char_list}')

checkSpecialChar()
checkSpecialChar()
```

```
Enter the string: Data science by ineuron
There are 0 Speical Characters in Data science by ineuron which are []
Enter the string: Data science by # ineuron @ live
There are 2 Speical Characters in Data science by # ineuron @ live which are ['#', '@']
```
